Re: Revision of Part 15 of the Commission's Rules to Permit Unlicensed National Information Infrastructure (U-NII) Devices in the 5 GHz Band; Office of Engineering and Technology and Wireless Telecommunications Bureau Seek Information on Current Trends in LTE-U and LAA Technology, ET Docket No. 13-49, ET Docket No. 15-105

Dear Ms. Dortch:

On June 30, 2015, Lee Schroeder, Michael Olsen, and Emmett O'Keefe of Cablevision, and I met with Renee Gregory and Jessica Almond, Legal Advisors to Chairman Wheeler. We discussed the importance of Wi-Fi to Cablevision's customers, the growth in consumer reliance on Wi-Fi, and the contribution of Cablevision's Freewheel product to the Commission's goals of advancing competition.

Cablevision also explained that two pending FCC proceedings—concerning LTE-U/LAA and U-NII-4—are critical to the ability of the unlicensed bands to support consumers. First, we discussed that comments filed in response to the LTE-U/LAA Public Notice revealed widespread recognition of the danger of LTE-U and LAA to existing consumer devices and the ineffectiveness of proposed sharing mechanisms. Second, we discussed the importance of the U-NII-4 band to addressing the growth of consumer Wi-Fi and the launch of 802.11ac Gigabit Wi-Fi. We urged the FCC to test both the Qualcomm and Cisco coexistence approaches, and to gather the technical information on the record necessary for proper consideration and testing of these approaches.

Pursuant to the FCC's rules, I have filed a copy of this notice electronically in the above-referenced proceedings. If you require any additional information please contact the undersigned.

Sincerely,

Paul Margie
Counsel for Cablevision
