I am retired, 22 yr., and reside in a fairly remote area of Santa Cruz, CA. County. The best cell provider here is spotty at best. My ISP is via satellite, which has its own set of deficiencies.

Changing 'access rules' to elevate high volume corporate traffic is irresponsible & corrupt without general public benefit. If Comcast, Verizon & their ilk want a broader/faster medium. They have the knowledge and equipment to build one for their own needs. The present internet operates as it was originally intended, open & neutral!
