Please approve the proposal to improve LPFM service to local communities. The service is needed very much. I volunteer for a church owned LPFM which operates at 100 watts now.

This low power means there are places within 2 miles of the station where you can pull into a convenience store and because of the metal canopy the signal is very bad.

We carry lots of local school events including sports and band concerts which local radio used to do but now is ignored by higher power stations who have virtually nothing to serve the community running a 15 second weather forecast and no local news or sports.

This LPFM service should be upgraded and expanded.
