

The following is a Note in support of my reply comments to the ARRL (submitted by Nickolaus E. Leggett on October 16, 2015 in ET Docket No. 15-170).

For a very detailed example of an amateur radio operator modifying commercial radio equipment, consult the following article in QEX: A Forum for Communications Experimenters. The article is “High Power Solid State Broadband Linear Amplifiers - A Different Approach”, by Francis Carcia, WA1GFZ, QEX magazine, ARRL Newington, CT, September/October 2015, Pages 3 – 12.

This article shows an example of the complex work that can be accomplished by amateur radio operators in modifying commercial electronics equipment.

Respectfully Submitted,

Nickolaus E. Leggett, N3NL
