since the new laws went into effect for net neutrality Time Warner cable got hit with a big fine from the FCC. In June of 2015 they were hacked into which was not reported to the FCC. They are not throttling the internet by slowing it down to get customers to pay for higher speed internet service which by the way all cable companies really do make a 95% profit on so is this the way how conduct business. No.. I oppose this buy out because does it's not fair to the small companies pushing there way on to the cable and internet markets. I don't think Charter can handle the phone call or produce any better quality of service then Time Warner cable. This deal does not protect the sensitive security of any accounts of Time Warner cable customers. I couldn't even afford the prices of charter services. if this deal goes through I will unplug all of my services. Time to take action and stop and say NO deal. No deal .. vote No..
