Dear FCC,

My name is Francisco Cruz and I live in Lexington, SC.

The principles of user choice and control are vitally important for a vibrant wireless ecosystem. But as written, the NPRM threatens to undermine these ideals by limiting what users can do with their devices. That's a concern, because I want to be able to update my own wireless software?not rely on slow manufacturers shipping updates.

The draft rules could enable device manufacturers to forbid third-party software, which would make me feel less safe about the wireless networks I use and operate.

Company's release firmware on their own time after release. Generally they are more concerned about pushing out the latest and greatest hardware for profit than worrying about a existing product that they already have cashed in on. There's more money to be made by focusing on this new hardware than fixing the issue for their released hardware. Open source projects prioritize these problems where monetary gain is not the primary focus.

Sincerely,

Francisco Cruz
