Dear FCC,

My name is Tyler Lee Walden, First Year, Drake University and I live in Des Moines, IA.

The principles of user choice and control are vitally important for a vibrant wireless ecosystem. But as written, the NPRM threatens to undermine these ideals by limiting what users can do with their devices. That's a concern, because I want to be able to update my own wireless software?not rely on slow manufacturers shipping updates.

The draft rules could enable device manufacturers to forbid third-party software, which would make me feel less safe about the wireless networks I use and operate.

yo, our nation is built off of innovation. The ideas of millions of people are more powerful than anything you guys can control. Take a lesson from history. In France kings have tried to control the freedoms and rights other can say. In Saudi Arabia Religion Controls EVERYTHING. We are a UNIQUE country, we are Democratic and we have freedoms in speech, religion and rights to not have soldiers use our houses as medical facilities. Keeping these freedoms is what makes us great. What you guys are doing is unconstitutional and not politically right. People hate being caged. They will become wild animals and feed on your blood and rape your women(just kidding(or not)). History is built off of great minds, Einstien, Steve Jobs, Woody Allen, That guy that invented POPTARTS. They were not limited in their ability to progress. They were not as connected, social or as technologically advanced as we are today. If we limit ourselves we will FAIL. If you guys don't understand that nobody will. We are weak as humans, alone we are dumb, unstable, and could break at any time, but if we unite as one we can form nations, conquer worlds and look at the smallest things in the universe. In conclusion, the world is united by different ideas, politics and view points. If we are limited in what we see, we might not be able to advance and resort back to the stone age!!

Sincerely,

Tyler Lee Walden, First Year, Drake University
