Dear FCC,

My name is DeVonna and I live in Fairburn, GA.

The principles of user choice and control are vitally important for a vibrant wireless ecosystem. But as written, the NPRM threatens to undermine these ideals by limiting what users can do with their devices. That's a concern, because I don't want to see community innovations, such as mesh networking, get cut off.

The draft rules could enable device manufacturers to forbid third-party software, which would make me feel less safe about the wireless networks I use and operate.

Getting rid of the free stream of internet could actually lessen creativity and make new innovations in the world less possible. In other words doing this could really put a stand still to the evolution of humans as a whole. Besides without internet all that will be is a bunch of bored people. Sure they'll go outside more but at what cost. For all one may know this could raise crime rate very high. For example there was a case in where a white scholar from Australia, that was geared towards greatness, was out for a job when \*boom\* he was shot dead. Why? Because 3 teens where bored. It's not exactly the thing that one would want. Causing boredom by taking away the free outlet of America's creativity will all in all terminate the brilliant minds of our future. An example of this is how the school education system is getting more advanced throughout the years. Internet is used in everyday classes. The internet is a basic smorgeboard of knowledge. Without it, half the kids not understand what's going on in class, that won't ask about it due to social implications (not wanting to look stupid in front of one's peer), can't go to the internet to look up examples of what they're trying to learn due to the fact that they can't use internet, because their family is poor so they aren't able to grow. No matter what one may think there is no advantage to anyone by making internet a pay for programming.

Sincerely,

DeVonna
