I am a Tracfone customer using Safelink's free monthly services, and am REQUIRED to keep my cell phone turned on, and make at least 1 phone call a day in order to receive my free minutes every month. In the middle of the night, my phone wakes me up with the message, "Free message: Unable to deliver message. Message blocking is active." Sometimes, this happens so often, that my phone runs out of memory the very next morning. Is somebody trying to hack into my phone and send messages on MY phone?... and how do I put a stop to this? Thank you.
