

Dear FCC,

My name is James and I live in Addison, TX.

The principles of user choice and control are vitally important for a vibrant wireless ecosystem. But as written, the NPRM threatens to undermine these ideals by limiting what users can do with their devices. That's a concern, because I don't want to see community innovations, such as mesh networking, get cut off.

The draft rules could enable device manufacturers to forbid third-party software, which would make me feel less safe about the wireless networks I use and operate.

Being a solo web designer / developer I use third party or free open source devices quite regularly to stay ahead of trends and upcoming innovation. Seeing that most of developers are sharing these for little cost I feel that making web access a more restricted place would only limit the access to ideas and innovations. Being self taught I would have never been able to you reach where I am today without the freedom to educate myself using these venues. Venues that would not be able to exist in a pay to play environment as they are strictly education. Also in a digital again startup startup companies rely on the freedom of search and discover to gain the audience need to showcase what they have to contribute to the world. If they are cut off due to additional charges and hassle you can only view this step as a backward thinking pushed by greed. This will end up becoming a digital have nots versus the haves. I for one am not in favor restricting communication, stifling growth, and unjust proposal such as these.

Sincerely,

James
