Gentlemen,

My amateur license call sign is W9AD my commercial license is PG1810727. I ask you give careful consideration to RM-11759. I can only assume that it's purpose is special interest driven. By removing 3600-3650 kHz from phone/image operation it will unfairly limit Amateur Operators the ability to operate using a mode of their choice. That area of the band has encouraged a number of operators with extra licenses to migrate their AM and SSB operations into an area where signals of higher quality RF and AF are encouraged and expected. I request that the commission not make any changes in the frequency allocation decision it made to modify Amateur Service phone/image privileges spelled out in R&O in Docket 04-140 released in 2006.
