To whom it may concern:

I have been an Amateur Radio operator since 1971 and I operate primarily the SSB mode of operation.

For the past 15+ years I have maintained schedules with other operators up and down the east coast that, like me, have built our own equipment. We have been operating between 3608 and 3650 KHz for the majority of that time and don't see or hear the need to redistribute the frequencies for other modes of operation.

As a Life Member of the ARRL, I do not share their viewpoints on this topic and hope that you don't make any changes to the present spectrum.

Sincerely,
Michael Stricker, WA1SE0
