

60001519364.txt

My close ham associates and I have been using 3606 for years on lower side band on a daily basis. I have monitored the range between 3550 and 3650 frequently and, unless a contest is in motion, there there have been very few signals. I am a CW operator and generally stay on the low end of 80 meters using that mode. When I hear RTTY users on the spectrum addressed in the filing, it only usually happens during contests. It seems inappropriate to make a change just based on contest schedules. The bottom line is that I am very much against this change.
