

Allowing 80m RTTY/Data mode to be used on 3500 to 3650 Hz is ludicrous!

The passage of this change would create a “telecommunications disaster”

In this case the airways between 3500 kHz to 3650 kHz would be full of multiple mixed mode signals fighting to be heard and simply creating unnecessary regional and worldwide chaos!

Any radio amateur should know that CW, RTTY, and the host of the growing digital modes **DON'T COMMUNICATE WELL TOGETHER AND MUST BE KEPT APART!**

I strongly encourage the FCC NOT to take any action on RM11759

Thank you for your time and consideration.

Craig Stewart, W4PHJ
