The ARRL was spot on adding phone spectrum to the 80 m band, it has created growth and listening 3600 and above you can hear regular groups with daily use. This proposal was initiated by special interest groups and this auto digital mode is inappropriate for the growing extra portion of the phone band. If you listen from 3500 to 3600 it is underused and would be more suitable for this mode. 73 W3UX
