I oppose the 12/11/15 petition of Lifetime Entertainment Services LLC to allow prerecorded voice calls to cable subscribers. I no longer have a landline and only use a cell phone and I know of no scenario whatsoever in which I would want to receive a robotic call to my cell phone from my cable provider. Furthermore, I frequently receive calls on my cell phone for people I don't know and when it's a robot, it's nearly impossible to get the calls to stop because I don't get to speak to a live person. Why should any company be allowed to cut corners and save money for themselves by using a robot to make so-called informational (which we all know are really advertising) calls? The answer is they shouldn't be allowed to do this at my - or any consumers' - expense. Thank you.
