We watch RFDTV on Direct Tv Channel 345 everyday for many hours. We depend on the up to the minute grain market information we use to market our crops. Additionally the weather reports and general farming information. All of this vital information is not available otherwise. No other channel fills this very important task. We farm 460 acres of corn, soybeans and wheat. Our labor feeds you and the world. Farming is very costly and we need all the info we can get to make decisions. This channel is top notch. It is unique. It is not about the Kardashians or Atlanta Housewives or any junk shows. If someone doesn't like the content of RFD they can push that button. Please keep RFD so we who labor thru our sweat and business risks can receive the info that speaks to us!!!!!!!!!!!!!! So when you drive into the country on the interstates, take a moment and scan the countryside. See if you can identify what crop (corn, soybeans or wheat) is planted in that field. Look at those black and white cows (Holsteins) that produce milk. Look at those ham producing pigs. Your food starts with us getting up every morning and going out the door in all kinds of weather to get the necessary things done for that day. How many of the city folk stay huddled on the couch in the their high rise concrete towers in their concrete cities? Remember when you put that fork in your mouth it started on a farm somewhere!!! Keep RFD!!!!!!!!!!!!!!!!!!!!!!
