Re: Notice of Ex Parte Communication: Terrestrial Use of the 2473-2495 MHz Band for Low-Power Mobile Broadband Networks, IB Docket No. 13-213; Amendments to Rules for the Ancillary Terrestrial Component of Mobile Satellite Service Systems, RM-11685

Dear Ms. Dortch:

On March 22, 2016, I spoke by telephone with Edward Smith, Legal Advisor to Chairman Wheeler, regarding Globalstar's application to occupy Wi-Fi Channel 14 with its Terrestrial Low Power Service (TLPS). I observed that if the Commission were to grant Globalstar special rights to test a proprietary service in currently unlicensed spectrum, then fairness and sound spectrum planning require that such testing include examination of options for general public use of Wi-Fi Channel 14. At a minimum, as part of any real-world testing Globalstar should (a) publish all protocol(s) its Network Operating System (NOS) uses to authorize spectrum used by TLPS devices in Channel 14 and (b) demonstrate that the NOS is capable of exchanging with non-TLPS devices all information needed for spectrum use in Channel 14, without reliance on non-public protocols or standards.

Pursuant to the Commission's rules, this notice is being filed in the above-referenced dockets for inclusion in the public record. Please contact me should you have any questions.

Respectfully submitted,

A handwritten signature in blue ink, appearing to read "Austin C. Schlick".
