I watch RFD-TV via Direct TV. I can't believe that such a an educational independent channel is in jeopardy. Now that the antenna TV is digital, people in rural areas are even more reliant upon the pay TV providers. The digital antenna TV signal is very disrupted by windy weather, so there are many weather conditions where that signal does not work or is so weak as to be worthless. Given the educational nature of so much RFD programming and that no other channel contains anything similar, the pay providers should not be allowed to drop RFD. Sincerely, Sally Meeting
