

I am commenting on this rule to vocalize my support for this proposed rule that offers national and local community driven alert systems more money. Gun laws are one of the biggest debated topics in the political system. By supporting this rule, I feel as it could be a positive step in the right direction as it may completely stop shootings between civilians and criminals where these local alert systems are installed. If criminals can get guns, and we do not want civilians to get them, there needs to be an alternative in which the cops can be notified immediately and proactively. The boost to assist community-driven public safety tools could be the change that we not only want, but need. Think of this – there was a shooting less than a mile away from you and you didn't hear or notice it. The criminal is on the loose and shooting anyone who gets in his way. People call 911 to alert the authorities that there is a shooter on the loose. All of a sudden the gunman runs into you and doesn't hold back. What a senseless shooting. With improved EAS, WEA, and local community driven alert systems, everyone around the initial caller of 911 would be alerted that there is a shooter on the loose less than a mile away and to get inside. With the level of technology that nearly every person has, why can't there be a better level of security against criminals?
