Parsippany, NJ 07054-0685

This appeal is in regards to 471 application number 1039859 for FRN 2870764, for service provider RMM Solutions, SPIN 143004428. The Administrator's Decision on Appeal letter, dated February 26, 2016, stated that the Decision on Appeal was denied because during the appeal review of FCC Form 471# 1039859 we did not provide the requested information required to complete the review for FRN 2870764. Consequently, the appeal was denied.

Contact was made with the appeal reviewer, Donna Cromie, regarding this lack of information. She had stated that she was still missing information for the server regarding it's make and model number/SKU. During the review process, as well as the initial appeal letter, it was noted that no funding is being requested on this line of the FRN because the server is not being used for caching. However, funding was still denied because the item, which we weren't seeking funding on, was not fully described. The server, covered in the Managed Services contract with service provider RMM Solutions, is a HP Proliant ML350.

Again, we request that you please reconsider your finding on this FRN based on the prior information that was submitted along with the current, updated server data.

Thank you for your consideration,
