As an Amateur Radio operator, I would welcome this change in removing the 15db gain restriction on linear amplifiers... PROVIDED... there is "no gain from 26 to 28 MHz" as expressed in 9.317 (a)(c). With the Commissions apparent withdrawal of enforcement in the 11 meter (CB) band and the CONTINUED sales of 11 meter capable amplifiers in various venues, eBay, Craigslist etc, the 10 and 12 meter bands suffer on a daily basis as manufactures are currently marketing these amplifiers as "10 meter amplifiers". Restricting or blocking the possibility of modification for 11 meter operation should be foremost on the minds of legitimate linear amplifier manufacturers.

Respectfully Submitted,  
Jimmie L. Stutzman KG7VC Amateur Extra
