RM-11767

I support Amendment of Part 97 of the Commission's Rules to Amend Section 97.317 by Removing Reference to the 15 dB Gain Limitation.

As long as spectral purity rules remain in effect; there is no need to limit the capabilities of modern Technology.

I do support relaxation or elimination with the option if the circuits used limit spurious harmonics to already set standards.

I have built an amplifier for my own use using the BLF-188XR chipset and with proper filtration; Emissions can be kept well within spurious emissions rules set by the FCC.

We must consider the revenue this could generate if the United States were to compete with already aggressive implementers of this new technology.
