

I wish to register my OPPOSITION to RM-11769. The change requested is unnecessary and will require FCC to create a new classification of communications, "symbol communication," which is unclear and appears nowhere else in FCC regulations.

It would have two practical effects:

- 1) To permit non-CW operation in small sub-bands of 50 and 144 MHz. If the petitioner wants this, he could simply petition for that change.
- 2) To permit data transmissions with a 20 dB bandwidth of 2800 Hz throughout the non-voice segments of the 3.5-30 MHz. This would constitute a significant source of interference for narrow-band modes.

Thank you for considering my objections. I am an Amateur Extra Class Licensee holding callsign K2VCO, licensed since 1956.
