

60001841704.txt

I am registering my OPPOSITION to Proceeding #RM-11769 in its entirety.

Primarily, however, I am opposed to the specific language that invites 2800Hz signals into non-voice band segments from 3.5 to 30.0MHz traditionally used for CW operation.

Digital transmissions in traditionally CW segments already creates confusion and interference, e.g. 7035KHz.

I would also like to voice my concern over the filing's demeaning, dismissive language with respect to Morse communication.

Thank you for considering my opposition and objections.

I hold Extra Class license AC4CA and have been a licensed amateur since 1955.
