

It is my opinion that RM-11769 is nothing more than an attempt to get the FCC to reconsider RM-11708. The RM-11769 technical mumbo-jumbo about symbol rates is another attempt to disguise the real intent to allow "special interest" spectrum use of commercial wide band systems that are currently not allowed in amateur radio. There is no valid justification or need for RM-11769 and it should be denied.
