Dear sir or madam, please note my opposition to this petition. There is ample spectrum outside of the portions of the bands allocated for CW (morse code) operation to accommodate all other means of communication. I would like to preserve the current allocations for their present worldwide communications use. CW is such a narrow bandwidth communications method, forcing such communication outside of the presently-defined areas to continue operation would make them more difficult to be found by others pursuing CW conversations, which would decrease their use and usefulness.

Respectfully,

--David A. Kindred, K3PO
