To Whom It May Concern (besides me),

The CW and digital mode allocations are important to both amateurs and the community we serve, both in regular use and during times of stress. These modes are viable under conditions when other narrow band modes (predominantly single sideband) cannot provide clear communications.

. . . and this is a community service; both within and besides the ARRL National Traffic System.

The result of this petitions acceptance is the opposite of the recent petition to increase the size of the 80m CW/digital sub-band by 50 KHz which has the intent to relieve some of the pressure on current digital operations.

If this petition is granted, given the selfish interests of some, it will be the demise of our ability to serve in this manner.

Please do not honour the petition to remove this sub-band allocation from our authorized operating frequencies!

Sincerely,  
Harry Bump, KM3D
