The elimination of CW sub bands would negatively impact the hobby. CW is the most reliable mode of radio communication in existence. The sound to noise ratio is so great that even the weakest signals can get through. It also allows for the cheapest and most economical QRP radios that are easily built and maintained by hams. This makes CW entry level to expert level radio communication, fosters real learning experiences through the building of inexpensive radios and a great deal of pleasure to the operator that takes a few minutes per day to learn the code. Many operators find this mode of communication so fulfilling that they have become CW only operators. Why spoil a good thing for those that haven't invested in that part of the hobby. If it ain't broke, don't fix it...and it ain't broke.
