A change is warranted. Digital should be allowed IF AND ONLY IF it is restricted to a bandwidth equivalent to CW. A bandwidth of less than 100 Hertz in all bands is reasonable. The CW bandwidth is one of the important factors for keeping CW sub bands, so a narrow bandwidth is an over arching concern in the HF bands. In the VHF and higher bands there is no justification for change since the CW sub bands are such a minor division in each band. Thank You.
