Please do not take away the rights to use CW in the portions already defined in the bands. If SSB is allowed in these areas it will take away our ability to communicate in them especially via low power which is a joy of mine. SSB's take up a much wider spectrum of the frequency and one SSB conversation would take up the space of several CW QSO's. Please preserve this area of the bands for CW and other digital modes. If anything were to change I would appreciate a CW only portion so that we could operate without interference. Thank You Curron Hill KB3DRW
