This is nothing but a back door implementation of the ARRL petition (RM-11759) to reallocate the 3600 kHz to 3650 kHz segment from the now voice segment to a data segment. RM-11759 is meeting resistance from the majority of those persons commenting on the petition, I am sure this one will be the same.

With the addition of a smoke screen to set band-width limits, which also has been defeated in the past. And I might add is NOT needed now.

I oppose this RM 100%.

Respectfully,
William Hummer
