

60002040608.txt

This petition should be rejected:

1. The frequency allocation tables all call out "CW, RTTY, DATA" for the subbands in question. There do not appear to be any "exclusive" or "CW-only" subbands.
2. If CW is such a waste of spectrum, would the petitioner next eliminate all voice and image modes other than those carried over data links? By the petitioner's definition, SSB must be simply an inefficient "nostalgia" mode.
3. All modes need to be available for continual development of the radio state of the art.
4. Please do not change the allocations.
