Robo Calls are an invasion of privacy and facilitate fraud and larceny by unscrupulous individuals and groups. They use threat, intimidation, long and short cons and frequently victimize the unwary. They also don't care whether the persons they call work days, swing or night shifts and will call at all hours of the day and night. We need you, the FCC to end this capacity for harm by making it possible through our existing telephone services and companies to opt out of all Robo Calls, with the telephone providers under mandatory compliance to provide this capacity for all of us as their customers. There also needs to be real teeth in Civil and Criminal charges against Robo Call offenders that ignore peoples rights to not be contacted by them, by Law Enforcement response as appropriate.

Retired Police Officer
