

As regards Notice of Inquiry ET Docket No. 98-153, I would like FCC to address the topic of using UWB radar technology in medical devices for diagnostic

purposes. We know ISM bands are already allocated for medical devices: what about UWB radars to be used in heart/breathing monitoring?

Sincerely

Enrico M. Staderini

P.S. Rome is in Italy, of course. Unfortunately your server requires a US state so I wrote CT. Is the "american" Rome in CT?
