

I have subscribed to satellite carriers in the past. I can not receive the local ABC or FOX affiliates with acceptable quality. When I can receive ABC it is not in color. Fox is hard to see through the grain. According to the networks, should be able to receive an acceptable signal--but their maps do not reflect the fact that I live in a natural earth depression caused by a large lake. The area is also heavily wooded. Why are my tax dollars enforcing laws that prevent me from watching TV?
