

Dear FCC, We are a user of frequency hopping spread spectrum =
radios for Ethernet links between our central computing facility and =
the remote buildings at our Mine Site. The demand for access to high =
speed data is increaseing rapidly and we have reached or exceeded the =
capacity on some of our links. The proposal to allow increased =
bandwidth capability for the suppliers of this equipment would have =
great benefits in that our existing infrastructure investment would be =
able to be reused and only the radio component upgraded / replaced.
