

Great care must be taken in any reconsideration of standards for out-of-band emissions related to satellite or other forms of communications.

The surface of the earth should not be bathed in a choppy sea of arbitrary, unwanted or unforeseen radio waves.

Scientific uses of the radio spectrum permit us to view the universe at the earliest possible moments after creation. Abuse of the radio spectrum could restrict our view of the universe to its nearest few hundred miles.

Please do not permit erection of a wall of satellites which seals us off from the rest of the universe.

Please do not relax commercial standards in any way which compromises the non-commercial and research uses of the radio spectrum.
