

I would like to voice support for the MURS VHF frequency allocations and that these allocations should remain open and available for unlicensed public use. The MURS VHF frequency allocations are very important since they allow access to the VHF band for use when FRS is not available or does not work well with the terrain or environment. In addition the current restrictions and licensing of MURS VHF allocations are very favorable and I feel they do not need amendment or refinement.

Eventually I feel further frequency allocations should eventually be made available on different bands allowing unlicensed access to various bands for there unique properties.
