

I am a 79-year-old woman who is dependent on her FM system for contact with the world about me in many ways. I use it for family dinners, in restaurants, theaters, lectures, classes, for use by a guide when I travel, when shopping with a friend, for one on one conversation with someone who has a soft voice which I cannot hear with my hearing aids. My FM system enables me to hear and respond to my 3-year-old great-grandson. My world would be greatly diminished without my FM system because I would be cut off from a great deal of contact with those about me. I strongly urge you to keep the frequency band 216-217MHz for use by the hearing impaired.
