

4/25/01

Hello. I just wanted to let you know that I am opposed to allowing Northpoint to share the DBS 12.2-12.7 GHz frequencies. I have three DBS satellite dishes set up pointing at various locations (61.5, 101, 110/119 degrees) which I feel is a substantial investment in equipment, and having interference on any one of those would be a large problem because relocation of my satellite dishes would be very difficult and costly due to the lack of alternate locations at my house with a clear line of sight to the satellites.

Although more competition would be welcome, I think the current selection of providers (local cable, Dish Network, DirectTV) provides a good choice already. So I urge you not to allow Northpoint to start broadcasting and causing interference to thousands of home dish users like myself.

Thank you very much,
