

I fully support RM-10355. Although the ISS transmissions certainly fall within the 'spirit' of the current wording, more specific wording certainly would be helpful. I, for one, think there is a place for limited 'broadcasting' in the amateur service. Just as the ARRL's digital transmission of bulletins at known freq/times/modes make for excellent signals to test and adjust station equipment, so too can ATV transmissions of Shuttle/ISS video. At the same time, the Shuttle/ISS video or audio streams simply are not readily available anywhere else and are quite informative as to the current state of our space program.

Respectfully,  
Matt Gilbert
