

I am in full support of RM-10352.
I feel that the narrowband modes need
formal protection from the wideband modes
on Amateur frequencies. I do not feel that simple
"gentlemens agreements" on band planning are
likely to provide a useful solution to the
incompatibility of wideband and narrowband
modes. As a digital and CW enthusiast, I know
first hand just how disruptive the wideband modes
are to to my communications.
I hope you will adopt RM-10352 and thereby reserve
some protected spectrum for narrowband modes.
thanks
