Re: Notification of Ex Parte Communication
MM Docket Nos. 01-235 and 96-197

Dear Mr. Caton:

This is to advise you, in accordance with Section 1.1206 of the FCC's rules, that on Tuesday, March 12, 2002, John Cottingham, general manager of Media General, Inc.'s WSPA-TV in Spartanburg, South Carolina met with Commissioner Michael J. Copps. The majority of the visit was dedicated to a tour of the station's facilities, specifically its technical and news operations.

Mr. Cottingham also discussed with Commissioner Copps the Comments and Reply Comments that Media General submitted on December 3, 2001, and February 15, 2002, respectively, in the above-referenced dockets. The discussion involved various issues raised in Media General's Comments and Reply Comments, including Media General's concern over recent increases in the cost of presenting local newscasts; the company's view that repeal of the newspaper/broadcast cross-ownership rule will enhance the delivery of local news and information; the increase in the number of media outlets and the growth of new media sources, such as the Internet, since the rule was adopted; the declining audience shares garnered by local television newscasts in the Greenville-Spartanburg, SC-Asheville, N.C.-Anderson, SC DMA and across the nation; declining levels of newspaper circulation; the view that the benefits of media convergence can only be effectively achieved through common ownership; the experiences of journalists working in several media at the same time; and the benefits for newsgathering, such as combined archives, that accrue from common ownership.

The attached material was provided during the course of the meeting. As required by section 1.1206(b), two copies of this letter are being submitted for each of the above-referenced dockets.

Very truly yours,

A handwritten signature in black ink, appearing to read 'M. Anne Swanson', with a long horizontal flourish extending to the right.

M. Anne Swanson

HERE COME THE SUPER JOURNALISTS

Learn New Skills or Face Some Downsizing of Your Own
By CORY BERGMAN

A WFLA-TV REPORTER is trying to keep her deadlines straight. Working a big out-of-town court case, her live shots are the least of her worries. Besides the 5pm newscast, she has to file a story for the Tampa Tribune and finish up a reporter's notebook for WFLA's website, TBO.com. A futuristic scenario? Hardly. Jackie Barron was the reporter, and it happened a year ago.

Tomorrow's most successful journalists will report seamlessly across TV, radio, newspapers and the web. Call the new breed, "super journalists": smart, hard-working communicators pushed to the limit to make the most of a story. Super journalists have broad skill sets. They're technically savvy, a whiz on the web and can write proficiently for a variety of mediums. They're flexible, quick-thinking adrenaline junkies who know the urgency of digital news in the new economy. Take today's typical 14-year-old. She watches TV, surfs the web, zaps instant messages and talks on the phone at the same time. Now just reverse the process.

But we have a long ways to go. Journalists are incredibly hardheaded. Many newspaper journalists live on one deadline a day. They're convinced television is sloppy and sensational. Meanwhile, proud TV journalists belittle everyone else. "We do TELEVISION," you can hear them say, "It's the only news medium that REALLY matters."

"The platform of delivery is probably the least important part of what we do as journalists, and yet it is the one thing that too many veterans want to hold onto," said Dan Bradley, VP of News for the Media General Broadcast Group, which includes WFLA-TV. "Deep down, most journalists want their stories to be read by as many people as possible. With that in mind, then we should all be embracing convergence."

Yet the nuts and bolts are getting in the way. While some journalists may recognize the value of broader exposure, they're already swamped with work. Facing longer hours and a litany of deadlines, convergence is becoming a bad word. "Most media companies have set up [journalists] with very tight reporting, editing and production schedules," said Mark Thalheimer, Future of News Project Director for RTNDF. "From a few research projects we've done, both print and broadcast reporters seem interested in increasing their skills sets, but it takes time, training and a significant commitment from management." "We need to reexamine our priorities, and make sure our journalists are using their time effectively," said Bradley. "I think it is important that salaries are established that recognizes the additional skills and work involved in creating relevant content for multiple platforms. This is not going to happen overnight, but must happen if we want our newsrooms to be competitive."

But the smartest journalists will make the first move. Fighting the inevitable is foolish. Ownership caps are loosening, and consolidation is kicking into high gear. Competent journalists who take the torch of convergence will win the hearts of the top brass. Think of it as a wide-open opportunity.

Take NBC, for example. Five years ago, it was blasphemy to suggest a single NBC correspondent would rattle off five live shots for MSNBC while working on a spot for Nightly News. Fueled by strong management commitment, NBC staffers soon realized the extra effort paid off. The most productive producers and correspondents began winning the biggest stories. The same goes for tomorrow's converged newsroom. Assignment editors who write for the web will climb the news ladder faster than those who ignore it. TV photographers who snap digital photos will end up landing the best assignments. Anchors with strong writing skills will win the opportunity to write a newspaper column. Writers who edit on a desktop will catch the eye of top management. "I believe as we go down the road a piece on this adventure, we will come to the realization that we are going to have to restructure our newsrooms, both broadcast and print," said Bradley. "Some of the best learning experiences have come from things being tried that in the past just would never have been tried."

New experiences demand an open mind and better training. While most white collar employees in today's economy have scrambled to learn new skills and take on a fresh approach, most journalists desperately -- foolishly -- hold on to the past. But a new economic reality has arrived. Consolidation is here to stay. Newsrooms that ignore convergence will soon find it difficult to defend a big coverage staff. Airing a story once doesn't justify its cost anymore. It's time to reinvent ourselves or confront some downsizing of our own. "If there is one single piece of advice I would offer to a newsroom that is faced with developing a relationship with a new platform, it would be don't be afraid to fail," said Bradley. "Fear of failure keeps the creativity needed to be successful bottled up." And don't forget, the super journalists are coming. They'll cover the biggest stories, win the largest audiences and earn the most money at twice the speed. Are you ready for them?

A Media General Station

The Future of News is Here

The media world is changing and that explains why the world's media need a Newsplex. Located in the capital city of Columbia, South Carolina, USA, Newsplex is a prototype, micro-newsroom that will help journalists find better ways to gather and disseminate information.

Newsplex is the result of a unique partnership between Ifra, the world's leading association for media publishing based in Darmstadt, Germany, and the University of South Carolina, the state's 200-year-old flagship institution.

Newsplex will train Ifra members and other media professionals as well as students from the University's College of Journalism and Mass Communications. Through its Affiliate program, the knowledge acquired in cross-media newsgathering will be shared worldwide with universities and professional organizations.

A Directorate of some of the world's leading news and technology companies will guide its work. No one can predict the future of news technology, but one thing is certain, it can be found in the Newsplex at the University of South Carolina.

Founding Directorate

- > Digital Technology International, Springville, Utah, USA
- > Edipresse Publications s.a., Lausanne, Switzerland
- > South Carolina ETV, Columbia, SC, USA
- > Morgenavisen Jyllands-Posten, Viby, Denmark
- > Guardian Media Group plc Regional Newspaper Division, London, United Kingdom
- > CCI Europe, Århus, Denmark
- > John S. & James L. Knight Foundation, Miami, Florida, USA
- > IMPRESA, Lisbon, Portugal
- > Archonica Architects, New York City, New York, USA
- > Star Publications, Kuala Lumpur, Malaysia
- > Morris Communications, Augusta, Georgia, USA

Affiliates

- > University of Tampere Journalism Research and Development Centre, Department of Journalism and Mass Communications, Tampere, Finland
- > University of Minnesota Institute for New Media Studies & New Directions For News, School of Journalism and Mass Communication, Minneapolis, Minnesota, USA
- > World Editors Forum, World Association of Newspapers, Paris, France
- > European Journalism Centre, Maastricht, Netherlands
- > Royal Institute of Technology (KTH), Media Technology and Graphic Arts, Stockholm, Sweden
- > Nanyang Technological University School of Communication Studies, Singapore
- > The University of Hong Kong Journalism and Media Studies Centre, Hong Kong
- > Centre de Formation et de Perfectionnement des Journalistes, Paris, France
- > University of Navarra, Pamplona, Spain
- > The Media Center, The American Press Institute, Reston, Virginia, USA
- > The Missouri School of Journalism, University of Missouri, Columbia, Missouri, USA

ifra Press Ops
Centre for Advanced News Operations

 UNIVERSITY OF
SOUTH CAROLINA

Where the Futures of Journalism
and News Technology Intersect

Leading the Way for Change

Newsplex will prepare journalists, students and media organizations for the future. Ifra is overseeing planning and construction. World-renowned architect Saf Fahim, head of Archronica Architects in New York, New York, USA, is designing the facility.

Newsplex is a multimedia environment where small groups of journalists can test new techniques and technologies for newsgathering and dissemination. Construction of the \$1.5 million newsroom is being funded by a prestigious international Directorate. Newsplex will be located on the campus of South Carolina ETV and operated jointly by Ifra's Centre for Advanced News Operations and the University of South Carolina College of Journalism and Mass Communications.

Rewriting the Rules

Worldwide, technology is driving change, particularly in the mass media. Print and broadcast are converging, new media are evolving and old media are looking for new technology and business models. That's why Ifra looked to the University of South Carolina College of Journalism and Mass Communications to create Newsplex.

The College has 1,300 students and an international reputation for scholarship and teaching excellence. It is a logical common ground for this extraordinary alliance of media professionals and educators.

Research and Teaching

The work at Newsplex will be watched closely by an impressive group of Affiliates including the Media Center at the American Press Institute, the World Editors Forum, and the University of Hong Kong Journalism and Media Studies Centre. Researchers from the University and elsewhere will monitor and evaluate the prototype newsroom and its impact.

Newsplex not only will teach journalists new skills, it also will instill a new mindset in each journalist that will allow him or her to be change leaders in their own newsroom. Conferences and seminars will further the dissemination of the Newsplex knowledge base. In fact, the Newsplex experience can be shared instantaneously with newsrooms across the world through sophisticated distance-learning technology and South Carolina ETV's 32 satellite uplinks.

Newsplex goals

- ...❖ Shorten the length of time between the introduction of new technology and its adoption into newsrooms.
- ...❖ Evaluate innovative methods and tools for the convergent marketplace of print, broadcast, online and wireless news media.
- ...❖ Increase the media's understanding and implementation of next generation news handling techniques and technologies.
