

I am writing to urge separate adoption of a Digital Audio Broadcasting spectrum rather than the adoption of digital within the existing AM and FM bands.

Not only will you make existing radios obsolete, you will force small radio stations off the air by broadening the bandwidth used by "big-box" radio stations implementing the new digital bands.

Please either implement a separate DAB spectrum like that in other countries, or do much more research on the effects you will be unleashing.

Thank you,
