

To the Commission:

This replies to the comments of ONCOR Electric Energy Delivery Company, et al., regarding the LF frequency assignment proposal; Paul Nikolich, for IEEE 802, et al., regarding the amateur satellite proposal for 2400-2402 MHz, and other comments generally. I want to emphasize that the amateur radio community has always been a good neighbor to those with whom we've shared frequencies, and hope the foregoing commenters will at least concede that point. The frequency allocations and uses proposed are de minimis concessions to the amateur radio and amateur satellite services, if granted. In general reply to the comments, I favor the Commission granting the proposal in toto.

Respectfully Submitted,
/s./ James Edwin Whedbee
