Re: Enhanced 911 Status Report

Dear Messrs. Muleta and Solomon:

Verizon Wireless hereby submits its quarterly status report documenting the progress of its efforts to deploy Phase II Enhanced 911 ("E911") capabilities, as required by the Commission's *Order* granting Verizon Wireless a waiver from certain Phase II E911 obligations.¹ Should you need additional information, please contact the undersigned.

Sincerely,

A handwritten signature in black ink that reads "John T. Scott, III". The signature is written in a cursive style with a horizontal line under the "III".

John T. Scott, III

¹ *In the Matter of Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems*, Request for Waiver by Verizon Wireless, CC Docket No. 94-102, ("Order"), 16 FCC Rcd. 18634 (2001).

E911 Status - Quarterly Report
August 1, 2003

SUMMARY

Verizon Wireless has successfully implemented extensive network components, purchased modified handsets, and completed a complex series of tasks associated with providing enhanced 911 Phase I and Phase II location services to the public. Verizon Wireless' efforts to deploy enhanced 911 location services are summarized as follows:

- Verizon Wireless is presently able to support E911 Phase II service requests in markets supported by all three of its switch vendors.
 - Verizon Wireless met its milestones for completing deployment of the network-assisted portion of AGPS/AFLT in Lucent and Nortel markets by April 1, 2002 and August 1, 2002 respectively.
 - Verizon Wireless completed deployment of the network-assisted portion of AGPS/AFLT in its Motorola markets by March 1, 2003.
 - As of July 15, 2003, and since its last report, Verizon Wireless has deployed Phase I service to another 124 PSAPs. Verizon Wireless now provides Phase I E911 service to a total of 1,975 PSAPs serving an estimated population of 145 million residents in 41 States.
 - Verizon Wireless has also deployed Phase II service to an additional 244 PSAPs since its last report. VZW now provides Phase II E911 service to 699 PSAPs serving an estimated population of 60 million residents in parts of 28 states.
 - Verizon Wireless has also deployed an interim EFLT solution in its Lucent and Nortel-switched markets that is activated commensurate with the activation of Phase II E911 AGPS/AFLT service to individual PSAPs.
- Verizon Wireless has fifteen GPS-capable models handset models it currently sells that are capable of transmitting location. Most of the handset models Verizon Wireless offers to customers are GPS-capable. Verizon Wireless has met the 25% handset deployment milestone established for the period that began July 31, 2002 and that ended March 30, 2003. 34% of the new handsets activated nationwide during that period were AGPS/AFLT handsets. Verizon Wireless is currently selling AGPS/AFLT handsets to meet its 50% deployment milestone for the period March 31- December 30, 2003. (Verizon Wireless met its initial handset deployment milestone requiring it to begin selling and activating GPS-capable handsets by December 31, 2001.)

I. AGPS/AFLT NETWORK DEPLOYMENT

Many parts of the wireless communication system – handset, cell site, switches, location PDE – must all interface to provide seamless voice and location data. The following summarizes, in brief, milestones completed by Verizon Wireless and its cell site, switch, and PDE infrastructure vendors.

- A. Lucent Network Components– Verizon Wireless previously met the April 1, 2002 deadline for implementing software upgrades to the portions of the network served by Lucent switches and is able to support E911 Phase II service requests in its Lucent markets.
- B. Nortel Network Components – Verizon Wireless met the August 1, 2002 deadline (approximately a month early) for implementing software upgrades to the portions of the network served by Nortel switches and is able to support E911 Phase II service requests in its Nortel markets.
- C. Motorola Network Components – Verizon Wireless met the March 1, 2003 deadline for implementing software upgrades to the portions of the network served by Motorola switches and is able to support E911 Phase II service requests in its Motorola markets.
- D. EFLT Interim Solution – EFLT is provided through software changes to both switches and to the PDE and is deployed in Lucent and Nortel markets alongside AGPS/AFLT.

II. HANDSET DEPLOYMENT

The *Order* required Verizon Wireless to begin selling and activating AGPS/AFLT capable handsets no later than December 31, 2001. Verizon Wireless met that requirement. The *Order* also established certain handset sales and activation milestones, requiring that at least 25% of all new handsets sold and activated between July 31, 2002 and March 30, 2003 were to be AGPS/AFLT capable. Verizon Wireless also met that requirement; 34% of its new handsets activated during that period were AGPS/AFLT capable. Finally, the *Order* required that at least 50% of all new handsets sold and activated between March 31, 2003 and December 30, 2003 were to be AGPS/AFLT capable. Verizon Wireless is currently selling AGPS/AFLT handsets to meet its 50% deployment milestone.

Verizon Wireless currently has fifteen GPS-capable handsets available to customers: Samsung models SCH-A310, SCH-A530 and SPH-I700; Audiovox models CDM9155-GPX, CDM9500 and CDM8300; LG models LG VX2000, VX3100, VX4400 and VX6000; Motorola models T720, T720 Free-Up and V120E; and Kyocera models

KWC2325 and KWC7135. VZW will continue to supplement its product line with additional GPS capable phones throughout 2003. Verizon Wireless is urging its vendors to meet its prescribed standards for products, which include the FCC's accuracy requirements. Vendors' ability to develop compliant handsets will determine ongoing availability of new handset models.

III. INTERIM NETWORK DEPLOYMENTS

Verizon Wireless was required to install interim, network-based technology in certain counties where it had received Phase II requests. By December 31, 2001, Verizon Wireless was required to provide Phase II capability to 100% of the area served by the requesting PSAPs in St. Clair County, IL and Lake County, IN. In addition, by April 1, 2002, Verizon Wireless was required to provide Phase II capability to 100% of the area served by the requesting PSAPs in Chicago, IL, Cook County, IL, St. Louis County, MO, and Harris County, TX.

Verizon Wireless successfully met the December 31, 2001 and April 1, 2002 deadlines but more than a year after completing its work, the St. Louis County, MO and Chicago, IL PSAPs have yet to acquire their LEC and CAD upgrades needed to activate E911 service, respectively.

- December 31, 2001: Verizon Wireless completed deployment of its interim network solution to provide Phase II service to 100% of the area served by the St. Clair County, Illinois and Lake County, Indiana (Gary-East Chicago) PSAPs.
- April 1, 2002: Verizon Wireless completed deploying the network infrastructure in Chicago, Illinois, Cook County, Illinois, St. Louis County, Missouri (St. Louis) and Harris County, Texas (Houston). Phase II service was turned live in Cook County as of April 1, 2002.
- The initial testing of Phase II routing enhancements was completed in Harris County on May 15, 2002. Thereafter, Verizon Wireless was able to complete its live deployment in Harris County on June 13, 2002.
- Verizon Wireless stands ready to complete the live deployment with Chicago, including the Phase II routing. Upon resolution of outstanding issues pertaining to the PSAP vendors, provision of the service can be completed.
- With respect to St. Louis, the St. Louis County PSAP is still disputing selective router charges from Southwestern Bell Telephone Company. SWBT will not install facilities for Verizon Wireless until it receives confirmation that its charges for the selective router will be paid. Since January 2002, the St. Louis County PSAP has declined to pay such selective router charges. This problem has

prevented Verizon Wireless from activating the Phase I and Phase II technology it deployed in St. Louis County over a year ago.

IV. PHASE I & II PSAP DEPLOYMENT STATUS CHARTS

As part of this status update regarding Verizon Wireless' Phase II compliance efforts, the FCC requested information regarding all pending Phase I and Phase II requests. The various attachments provide the status of the progress of Phase I and Phase II requests as of July 15, 2003. Deploying E911 services requires cooperation and coordination between multiple parties.

- **Attachment A** provides a list of the 1,975 PSAPs who are presently receiving Phase I E911 Service from Verizon Wireless and demonstrates Verizon Wireless' continued commitment to providing E911 service. Verizon Wireless now provides Phase I E911 Service to PSAPs covering approximately 145 million residents in 41 states.
- **Attachment B** contains a list of the 92 requests for Phase I E911 Service that Verizon Wireless is presently working on, the status of deployment milestones documenting progress to date, comments on the deployment status, and anticipated in-service dates. In the in-progress Phase I deployment chart found as Attachment B, Verizon Wireless has attempted to distill its experiences regarding each request by: 1) identifying industry-accepted "deployment milestones" to advise the Commission as to the stages in the deployment process the parties have completed and what remains to be done; and 2) supplying comments that provide further information, albeit not exhaustive, regarding the types of issues that arise in the course of these deployments. Even where Verizon Wireless has completed its front-end milestones, there remain LEC and PSAP actions that must be completed before Phase I can go live.

PSAPs: There are a variety of reasons why some PSAPs have not been able to work aggressively with Verizon Wireless or the vendors to complete deployment of the service. In these instances, Verizon Wireless tries to move forward to the degree possible.

911 Service Provider (Local Exchange Carrier): In some cases, the LECs are declining to provision trunk orders until an interconnection agreement amendment is finalized to cover E911 services. As indicated above in Section III, disputes with LECs over the appropriate party to bill for various network charges has also delayed implementation. Another reason for delay is the need for LECs to complete infrastructure upgrades, usually involving the selective router, before provisioning E911.

State 911 Authority: A few state 911 authorities have asked Verizon Wireless to provide a “Proof of Concept” demonstration before they will authorize deployments in the state. This process can significantly forestall meeting the six-month deployment window, especially if the 911 authority is testing with multiple carriers on a sequential basis. Even if a demonstration is not required, some authorities must approve a carrier’s deployment plan before work can proceed, or have undertaken the responsibility to order trunks or otherwise manage the deployment process on behalf of the PSAPs within the state themselves.

- **Attachment C** provides a list of the 699 PSAPs in parts of 28 states who are presently receiving Phase II E911 Service from Verizon Wireless and demonstrates Verizon Wireless’ continued commitment to providing E911 service. Verizon Wireless estimates that about 60 million people live in these areas.
- **Attachment D** contains a list of 125 requests for Phase II E911 Service. Under the clarifications of the Commission’s rules release in its recent *Richardson Reconsideration Order*² VZW has mutually agreed to alternative implementation deadlines with PSAPs in many cases. Verizon Wireless, the PSAPs and the relevant local exchange carrier must complete certain milestone tasks before interoperability testing, the final step before a system goes live.

Attachment D also identifies the major stages or milestones in the deployment process that the parties must complete, details the milestone status, and provides further comments regarding the reasons for delay. Where possible, because of full LEC and PSAP participation, the deployment milestones can proceed expeditiously, with some tasks occurring in parallel. Where LEC and PSAP participation is an issue, Verizon Wireless has nevertheless initiated deployment, focusing on those milestones that it can accomplish alone. Specifically, once milestones 1 and 2 are complete (deploying Phase I service and making the network AGPS/AFLT capable), VZW proceeds with milestone 7 (establishing accurate cell site location information in the base station almanac).

Brief explanations of the various milestones from Attachment D are as follows:

- 1) **Deploy Phase I Service:** VZW and its vendors have worked with LECs and PSAPs to turn up Phase I service to most of the requests in VZW’s Lucent and Nortel-switched markets.
- 2) **Load AGPS/AFLT Software:** Verizon Wireless tested and loaded software in its switches and cell sites, installed a pair of PDEs, and conducted

² *Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems*, CC Docket No. 94-102, Order on Reconsideration, rel. November 26, 2002 ("Richardson Order")

FOAs of the system with PSAPs. Verizon Wireless completed these network upgrades as required by the *Waiver Order*. VZW has met this milestone for 100% of the Phase II requests in its markets. Having readied the network, Verizon Wireless stands prepared to complete other tasks required for individual deployments in 6-14 weeks, on average, depending on the number of cell sites.

3) Upgrade LEC ALI Database Interface: LECs establish the data protocol for interfacing with their ALI databases. Once the data protocol is established, the LECs may need to perform software upgrades, among other things, to provision the ALI database to pull the data (*i.e.*, steer an ALI query) from the MPC. VZW's vendors then work closely with the LECs to establish connectivity via the interface with the MPC.

4) Modify ALI Data Format: The LEC and the PSAP must agree on the format for transmitting and displaying the Phase II data on the PSAP's CPE. Depending on the PSAP's preference, the LEC may need to build additional fields into the ALI data format to allow exact placement of the data parameters in the ALI record.

5) Modify PSAP CPE (and CAD, mapping equipment, if applicable) Screen Display for ALI format changes: Once the modified ALI data format has been agreed to by the LEC and PSAP, the PSAP and its CPE vendor must make any changes necessary to utilize the modified ALI data format. Similarly, if the PSAP wants to ensure that its ancillary equipment, *i.e.*, CAD and/or mapping equipment, is not adversely impacted by the modified ALI data format, it will need to consult its vendors and make whatever changes are necessary to that equipment to accommodate the ALI format.

6) Modify PSAP CPE for rebid (requery) capability: The PSAPs receive the Phase II data stream from the ALI database when their ANI/ALI Controller issues a request ("bid") to the ALI database. The initial bid is made upon receipt of an ESRD/ESRK or pseudo ANI -- which usually occurs before the PDE has completed the more precise Phase II location calculation. In the event Phase II data is requested before the data is received by the ALI database the system provides Phase I location data as a default. The PSAP equipment must therefore be able to rebid (requery) the ALI database for the Phase II location information.

7) Establish Accurate Cell Site Locations/ Base Station Almanac ("BSA"): VZW and its vendors must: collect data regarding exact coordinates for the location of its antennas; conduct an RF analysis to ensure adequate E911 coverage to the PSAP; perform a site survey to ensure the accuracy of location measurements obtained during data collection; calibrate the system by judging PDE calculations against ground truth; and populate the BSA with the collected data.

8) Interoperability Testing: First, the system must be tested for end-to-end interoperability before the system can go live. This step ensures that all components of the E911 Phase II network can communicate with each other.

In addition to the milestone status, the comments contained in Attachment D address:

LECs: Local Exchange Carriers must upgrade their ALI database interfaces to accept Phase II data from wireless carriers. Specifically, as provided in milestones 3 and 4, the LECs must upgrade their ALI databases and review and modify the ALI data format for sending Phase II data to the PSAPs, as necessary. The LEC Phase II ALI format must be provided to the PSAP to support the display and utilization of Phase II data. Some of the smaller LECs may not have completed necessary upgrades. The LEC must also conduct interoperability testing verification with the MPC vendors.

PSAPs: In some instances VZW is ready to complete work but is waiting on PSAPs and their CPE equipment (and CAD or mapping equipment, where applicable) vendors to modify their equipment to be able to utilize the Phase II Data and to provide rebid capability before final testing and live activation (see milestones 5, 6). In other instances, the PSAPs have requested a stop of the Phase II deployment for a myriad of reasons. Some of the reasons are: CAD or other equipment issues; pending resolution of PSAP/LEC contracts or tariffs; other PSAPs with whom they share a selective router must become ready for Phase II before necessary modifications to the shared SR can be made; the PSAP is migrating from HCAS to modified version of NCAS for Phase II and thus a connection between the LEC ALI database and VZW's MPC must be established; resource constraints; the PSAP wishes to install its own selective router. Again, these delays can impede completion of Phase II service and may require a renegotiated completion date.

DECLARATION OF RICHARD J. LYNCH

I have read the foregoing E911 Quarterly Status Report. I declare under penalty of perjury that the foregoing is true and correct. Executed on JULY 23, 2003.

Grand Count	1975		

State	County	Requesting Entity	Request Date	Milestone Status ¹	Anticipated In-Service Date	Comments
Milestones: 1-MSC Configuration 2-Cell Site Sector & RF Data 3-SS7 Gateway 4-MSC Integration 5-Traffic Plans 6-Voice Trunks						

Note: Front-End Milestones
1 - MCS Configuration - Information provided by VZW on their MSC location, signalling, contacts, etc.
2 - Cell Site Sector & RF - Defines the MSC and individual cell site sector footprint. Required to engineer and coordinate PSAP boundaries
3 - SS7 Gateway - Required to Signal between the MSC and the Wireless 911 Service Provider SCP
4 - MSC Integration - Tests the signalling between the MSC and the Wireless 911 Service Provider's SCP
5 - Traffic Plans - Engineered by the Wireless 911 Service Provider to coordinate with the PSAP, load the MSAG to the ALI Database, and load to the databases associated with the SCP
6 - Voice Trunks - MSC to S/R must be in-place to deploy WE9-1-1 Phase I service
