

At the corner of Glenburnie and Neuse Blvd. in New Bern NC there is a signal that sound like an automated ID signal that blankets the FM 107.9 signal. It repeats about every 10 seconds and seems to extend up to 1/4 mile from the intersection. I am not a HAM and do not have the equipment to give a more accurate measurement nor can I make out any call sign. All I can tell is that I noticed it about 4 to 5 months ago.

Thanks for checking into this.
