

Regarding ET 03-104, I fully support the comments filed by the American Radio Relay League. It is also my assertion that the proponents of Broadband over Power Line (BPL) have not supplied credible scientific evidence to support the approval of ET 03-104 at this time.

I am especially concerned about the documented interference that this technology can and does cause to licensed radio services between 2 and 80 MHz, as seen in other countries that have adopted BPL.

I feel that approval of this docket violates FCC rules by encouraging a technology that is known to cause interference to licensed services, and is not in the public interest.
