

I am in full support of the comment submitted by the American Radio League in regards to Docket ET 03-104. I agree the comments made by proponents of Broadband over Power Line have little if any credible data to support approval of this docket at this time. Further research in BPL will be needed to avoid the great risk this innovative technology will not cause permanent interference to services in the 2mhz-80mhz frequency rance. Approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public!
